

OPERATIONS GUIDE

MasterMind Finance Operations Guide

Fees • Collections • Parent reminders • Salaries • Expenses • Reports

Release 1.0.12 This guide describes the guided Finance workflow introduced with next-cycle billing and real PDF receipts.

Prepared for administrators of MasterMind Coaching Classes

28 July 2026

1. Finance at a glance

Use one clear path for each job. Fees Management defines what a student owes. Fee Collection records money received. Expenses tracks salaries and all other costs.

Need to do	Go here	Result
Assign or change a fee schedule	Finance → Fees Management	Installments generated by billing period
Collect full or partial payment	Finance → Fee Collection	Payment record + PDF receipt
Pay a teacher salary	Finance → Expenses	Salary paid + salary receipt
Record rent, utilities, or supplies	Finance → Expenses	Pending/overdue/paid obligation
Review totals	Finance → Overview / Reports	Revenue, expenses, pending balance, net profit

Quick start

1	Create or select a fee plan Choose Monthly, Quarterly, Half-yearly, Annual, or One-time.
2	Assign it to the student Enter billing start, first due date, and session end.
3	Collect a specific installment Choose the child and month/period, then record full or partial payment.
4	Send the receipt Download the PDF, share through WhatsApp, or email it when the parent has supplied an email.

2. Set up a student fee

All fee assignment happens in Fees Management. Fee Collection intentionally has no duplicate setup form.

1	Open Add Fee Finance → Fees Management → Add Fee.
2	Select the student Only students from the selected academic session are listed.
3	Select a reusable fee plan The plan supplies frequency, default amount, and academic year.
4	Confirm the schedule Enter amount, billing start date, first due date, and session end date.
5	Save The current period is created once. Future periods appear automatically at their period start.

Frequency meanings

Frequency	Cycle	Example from 1 April
Monthly	1 month	April period due 1 May
Quarterly	3 months	Apr–Jun period due 1 July
Half-yearly	6 months	Apr–Sep period due 1 October
Annual	12 months	Apr–Mar period due 1 April next year
One-time	No recurrence	Due on the chosen date

Important Changing a plan later does not rewrite paid historical installments. Inactivating a student stops future periods but retains paid and partially paid history.

3. Understand due and overdue dates

Recurring fees use next-cycle billing. A period is pending while it is being delivered and becomes overdue when its due date is reached.

Date	What exists	Status
1 April	April installment is created; due 1 May	Pending
30 April	April installment still has a balance	Pending
1 May	April reaches due date; May installment is created	April Overdue; May Pending
1 June	May reaches due date; June installment is created	May Overdue; June Pending

Schedule guardrails

Rule	Behavior
Idempotency	Opening Finance repeatedly cannot duplicate an installment.
Session end	No period starts after the schedule end date.
Student inactivation	The inactive date becomes the effective end for future generation.
Legacy rows	Existing paid history and old due dates remain unchanged.
Outstanding balance	Partial payment leaves the remaining amount visible and reminded.

4. Collect payment and issue a receipt

1	Search the student Open Fee Collection and select the student from the real session list.
2	Select one or more installments Each row identifies the fee plan, period, due date, paid amount, and balance.
3	Enter the payment Choose full or partial amount, method, payment date, and transaction/reference.
4	Confirm collection The balance and status update in one transaction.
5	Distribute the receipt Download the PDF. WhatsApp opens the primary parent number; attach the PDF before sending. Email is available after the parent supplies an email.

	Receipt controls A payment cannot exceed the installment balance. A PDF receipt is generated for every completed payment; quick “Mark Paid” shortcuts do not bypass this audit trail.
--	--

What the parent sees

The Parent dashboard and Fees page show each pending or overdue installment by student, period, due date, and remaining balance. The reminder remains after a partial payment and disappears only after full payment, waiver, or cancellation.

5. Teacher salaries

One obligation is generated per active teacher per month. The full monthly salary is used; there is no proration.

When	Status	Admin action
From month start through month end	Pending	Review amount and teacher
After the month-end due date	Overdue	Open Expenses and record payment
After payment	Paid	Download salary receipt

1	Open Finance → Expenses Salary rows are labelled TeacherSalary and appear beside general expenses.
2	Choose Mark paid Enter payment date, method, and optional transaction/reference.
3	Confirm Status becomes Paid and the audit metadata is stored.
4	Download receipt Use the row action to save or share the teacher salary PDF.

6. General and recurring expenses

Use Expenses for rent, utilities, supplies, maintenance, marketing, and other institutional costs.

Option	Use it when	Effect
Paid now	Money has already left the institute	Creates a Paid expense with payment metadata
Pay later	The invoice is due in future	Creates Pending, then displays Overdue at due date
Recurring	The same obligation repeats	Creates one unique occurrence per cycle

Recurring expense frequencies

Monthly, Quarterly, Half-yearly, and Annual recurrence use the same idempotent occurrence rules as fees. Pending obligations count in accrual-style expenses and net profit.

1	Add Expense Enter category, description, amount, payee, date, and due date.
2	Choose payment timing Select Paid now or Pay later.
3	Optional recurrence Choose frequency and recurrence end date.
4	Pay later obligation Use Mark paid when settled, then download the PDF receipt.

7. Reports, reminders, and troubleshooting

Reading the totals

Metric	Meaning
Revenue	Completed fee payments only
Pending	Outstanding student installment balances
Expenses	General expenses plus teacher salary obligations
Net profit	Revenue minus accrual expenses

Troubleshooting

Symptom	Check
Student is missing during fee setup	Confirm the selected academic session and that the student is active.
A fee is not overdue yet	Check its next-cycle due date; pending is correct before that date.
Delete fee is blocked	Paid/partially paid records are immutable. Only unpaid rows without payments can be deleted.
Parent reminder remains	Confirm the installment balance is zero, waived, or cancelled.
Email receipt fails	The parent must add a valid recovery email; provider failure is reported, not hidden.
Duplicate-looking charge	Compare period start and occurrence key. Genuine duplicates should be reported to support.

Safe operating rule Use production students such as test/test2 read-only during verification. Create payments only against isolated fixtures so financial reporting remains trustworthy.
